

CAIRN MEDICA

PRICE LIST

Anti-Wrinkle Treatments

Botulinum Toxin A is an injectable treatment which blocks certain nerve signals in the muscles it is injected into, preventing them from contracting. This therefore prevents new wrinkles from forming in these muscles as well as smoothing existing static lines.

All new clients / treatments require a face-to-face consultation which is £20 but deducted from final price. A two week review is offered free of charge.

Forehead **1 area** **£130**
Forehead **2 areas** **£180**
Forehead **3 areas** **£230**
Brow lift **£180**

Bunny lines **£50***

Neck (platysmal) bands **£300**

***3 for 2 package available OR**

***Add on any of these treatments to 3 areas of forehead for a reduced price of £30**

Hyperhidrosis treatment

Botulinum Toxin A also block the signals that are required to produce sweat, therefore can be used in areas such as armpits, cleavage, inner thighs etc. Treatment typically lasts up to 6 months.

Underarms **From £300**

Other areas available on request and priced following consultation

Bruxism treatment

Botulinum Toxin can be used to treat the masseter muscles, which brings relief to people who grind their teeth, and it also slims the jaw line..

Masseter treatment **£180**

Dermal Fillers

We use hyaluronic acid dermal fillers by Teoxane which are medical grade, FDA approved and vegan friendly. Let our medical specialists assess you and enhance your natural beauty by replacing loss of volume and tone in areas due to aging, or create more definition and balance of your features overall. We strive to achieve a natural look and will make changes as subtle or gradual as you wish.

These typically last up to 12-18 months although length of time will vary per individual and lifestyle.

In addition to this Clare offers a safe and pioneering service of ultrasound guided filler which ensures there is no vessel being injected, thereby eliminating the risk of vascular occlusion.

Face to face consultation required prior to treatment costs £20 which is refundable against treatment price.

Non-Surgical Rhinoplasty /

Tear Troughs

From £300

Fat Dissolving Treatment

Intralipotherapy is an increasingly popular, non-surgical alternative to liposuction. The fat dissolving product is injected directly into the subcutaneous fat (just under the skin) with a small needle. or cannula. This destroys the fat cell membranes, causing the cells to liquify and breakdown into fatty acids which are naturally removed through the body's lymphatic drainage system. This process permanently removes these fat cells and over a course of several weeks can aid the reduction of stubborn pockets of fat that have been difficult to lose with exercise and healthy eating alone.

Under Chin
